

Data Driven Discoveries in a Changing Climate

Exploring the opportunities offered by AI for data-driven discoveries to better understand climate change impacts and develop new solutions to adapt to a changing climate.

Emerging data science methods

Using existing data science methods from other disciplines to extract more knowledge from climate data

New data science applications

Developing new data science and AI applications on existing climate change adaptation data

Open data and data challenges

Make existing data available to other domains to increase WUR's visibility on climate impact
