

The training will cover general aspects, method validation and routine analytical quality control.

Introductions and examples will be presented by the EURLMP team. The participants are encouraged to ask questions and join in the discussions during the presentations, to make the session more interactive and lively. There is no fixed timing per topic, this will depend on the number of questions and length of discussions. The aim is that at the end of the session you will have most of your questions on the topic answered or at least provided with useful directions how to apply in your own laboratory.

Moderator: Monique de Nijs

EURLMP staff joining in: Hans Mol, Theo de Rijk, Leo van Raamsdonk, Ed Boers and Patrick Mulder
