

### Hiring a 'Nutrition Sustainability R&D intern'!

Come join the team and help Nutrition Business Group on their journey to Net Zero.  
Starting date: September

You will be working on activities that support the Nutrition Net Zero Program. This can mean:

- 📊 Doing data analysis and scenario modelling to define key hotspot and possible interventions.
- 🗣️ Creating engaging materials for regional teams worldwide and for senior stakeholders.
- 🤝 Setting up workshops to stretch current activities to create bigger impact (GHG reduction).

There is a lot of flexibility in shaping the role based on key interests, business needs, and development wishes. This role focuses on gaining experience in a working environment, rather than writing a master thesis (fulltime).

I am looking for someone that has either a technical background with a strong business acumen, or a (sustainable) business student with a keen interest in science & technology. And, of course, a passionate foodie 🍷 and sustainability champion 🌱!

We will work closely together from our Global Foods Innovation Centre 'Hive' in Wageningen. You will be exposed to various teams within the R&D organization including all the regional teams from all over the world 🌍. Other colleagues you will be working with are from procurement, central sustainability team, customer development, and marketing.

If you are interested, please apply through the following link, and make a reference to this specific role.
